

saunnum
ready-made saunas

A woman is sitting on a wooden bench in a sauna, wrapped in a light-colored towel. She has her eyes closed and a peaceful expression. To her left, a wooden bucket with a handle and a long-handled ladle is placed on the floor. The walls of the sauna are made of vertical wooden planks, and the lighting is warm and soft.

Saunum's mission is to encourage more and more people to discover the sauna as an exceptionally pleasant and relaxing way to maintain their health.

Developing smart, safe, high-quality and healthy sauna solutions that are characterized by modern design, functionality and a pleasantly simple user experience is a subject close to our hearts.

saunum

KNOW-HOW

Skilled Work and Training

- **Quality Work** – With extensive experience in sauna construction and trained staff who know how to deliver the best results. Built according to detailed shop drawings and specifications. Each sauna is as good as the previous one. Consistently high-quality results.
- **Complete, thoughtful, and functional solutions.** We use 3D modeling in design, Which helps to work out all details of the sauna cabin, reducing problems and errors during construction. Done right from the start – ensures a complete and functional final solution.

HIGH QUALITY

Durable materials

- **High-Quality Materials.** No compromises are made in the selection of materials. We use materials from renowned manufacturers that have passed compliance tests and meet European standards.
- **Premium laminated wooden window frame** – unique solution developed specifically for the sauna. The window frame is glued together from two different woods. Painted pine outside, resistant to weather conditions and thermally modified aspen inside, ideal for the sauna environment, blending with the rest of the interior finish.

SUSTAINABILITY

Energy Efficiency and Durability

- **Energy-efficient** – Carefully installed vapor and wind barriers minimize air leaks, playing a crucial role in achieving building energy efficiency. Reduced air leakage ensures the correct functioning of the mineral wool in wall constructions. The combination of vapor, wind barrier, and wool keeps the heat generated by the stove inside the sauna. This shortens heating time and saves energy.
- **Sustainable – 3D design** provides a good basis for material optimization. As a result, production waste is minimal. Additionally, interior cladding is made from recycled wood.

CUSTOMIZABILITY

Tailor-made Solutions

- **Create your own sauna** with multiple color, material and design options and technological features to choose from. If you have your own design in mind, just let us know. We're more than happy to build your dream sauna and home spa!

PORTABILITY

Simply place your sauna wherever you want it

- **Easy to install.** The sauna is a complete solution and ready for transport. At the destination, it only needs to connect the main cable to the electrical panel, install the rainwater system, and base board around the sauna
- **Portability** – Simply place your sauna wherever you want it. Our outdoor saunas have special hooks* for easy lifting with a crane and they can also be moved with a forklift.

* available with the Saunum AirCube series

Saunum AirCube Space

Modern Design: Sleek and contemporary design with advanced features.
