The new-generation smart sauna control device

# saunum leil

Saunum Leil is a new-generation sauna control device that is convenient and easy to use. Leil optimises the heating time required according to the sauna's specifics, thereby saving energy costs. By selecting one of three pre-set steam regimes, you can heat your sauna with just a few touches of the screen. If you add the automatic water dousing system, Saunum AutoLeil, you can also control it from the Leil screen. The ModBus integration option has been created to connect the device to a smart home. Once the sauna is ready at your selected time, simply turn on the Saunum climate device and enjoy easy breathing, mild heat, and a particularly relaxing sauna experience.

Touch screen  
control panel

**Temperature range:** 40–100°C

**The heater's operating time:** adjustable up to 12 h

**Sauna climate device:** 3 speed levels  
NB! Use the climate device only while you are in the steam room.

**Presets:** 3 different types of steam (temperature, heating time, operating time of the climate device)
